INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/JP 03/10207

- Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US-A-5 961 291 (KOYANO SHINJI ET AL) 5 October 1999 (1999-10-05)

D2: GB-A-2 102 072 (DENCO AGR LIMITED) 26 January 1983 (1983-01-26)

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of independent claims 1, 6 and 11 of the present application cannot be considered as involving any novelty (Article 33(2) PCT) for the following reasons:

the document D1 (the references in parentheses applying to this document) discloses a vacuum pump (fig 1 and 2 and column 1, lines 10-12), and a method of control thereof, comprising a pump rotor (103) disposed in a casing (100) and a pump controller (20) suitable for controlling rotation of said pump rotor in a forward direction (fig 17, column 9, line 66 - column 10, line 13) in accordance with a predetermined pattern at the time of starting the pump and rotating the rotor in the forward direction in a steady state once a sensor has detected the normal rotation of the rotor (column 8, line 52 - column 9, line 18 and fig 10, 16 and 17).

Document D2 also discloses (page 1, lines 10-15) a compressor and a method of control thereof with all the features of independent claims 1 and 6.

Dependent claims 2-5 and 7-10 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty, see documents D1 and D2 and the corresponding passages cited in the search report.

The subject-matter of claims 1-11 is industrially applicable (Article 33(4) PCT).
